

NC DOT, Division 8 Richmond County, NC

Location: Richmond County, NC

Contractor: North Carolina Department of Transportation

STALITE lightweight road material on the right lane and regular weight 78M on the left lane. STALITE is most often the material of choice in this area, since it can be applied as the ride surface without a blotting seal. This saves the cost of an extra step in the paving process. Also obvious is the darker color, which gives it an appearance much like plant mix asphalt.
